DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Eric J. Nuss on April 13, 2004, and was consulted with Mr. Ken Parker.

2. The application has been amended as follows:

Claim 1, in line 5, change "... separated ..." into - - ... arranged ... - -; and in line 9, change "... the first second ..." into - - ... first and second ... - -

Claim 12, in line 7, change "... separated. ..." into - - ... arranged ... - -.

Allowable Subject Matter

1. Claims 1-22 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Applicant filed the certified English translation of the Priority document of Korean Patent Application No. 1998-51185 filed on November 27, 1998.

The prior art of record neither discloses nor teaches a liquid crystal display device and a method of manufacturing a liquid crystal display device comprising various elements and steps, more specifically, as the following:

a first pixel electrode disposed in the first pixel region, the first pixel electrode overlapping a region of the first data line, and a region of the second data line; and a second pixel electrode disposed in second pixel region, the second pixel electrode overlapping a region of the second data line that is not overlapped by the first pixel electrode [claims 1, 12; as shown in Fig.3].

The closest reference US 6,226,057 (Lee) discloses the pixel electrode overlapping a region of the first data line ($22n-1$) and overlapping a region of the second data line ($22n$), so that the adjacent pixel electrodes overlap each other. The present invention is the pixel electrode only overlapping a half size of the data line as shown in Fig.3, so that the pixel regions are not overlapped as claimed in the claims 1 and 12, therefore, increasing the aperture ratio.
